

FELIX THE CAT™ 3-D Motion Clock

Assembly Instructions

(A) Battery installation

Carefully insert two AA batteries in the battery compartment, following the indicated polarity (+/-). Unlike most devices, batteries in this clock should **point in the SAME DIRECTION**.

Please do not use DURACELL® batteries, which may be too large to fit in the battery compartment and/or damage the contacts.

(B) Adjusting the time

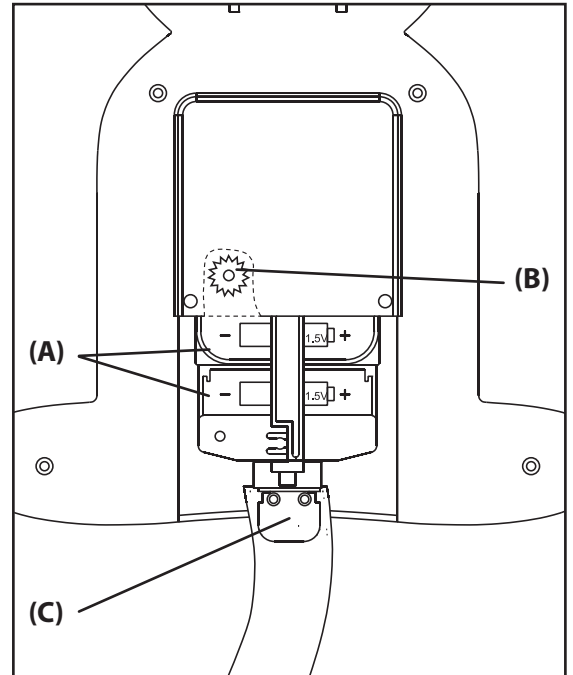

The **time set dial** is located just above the top battery, under the lip of the back of the clock (image at right is a “cutaway” view).

(C) Attaching the tail to the pendulum

The tail is tucked away in either the top or bottom compartment of the box. Insert it onto the pendulum as shown.

(D) Starting the pendulum

After mounting the clock on the wall, ensuring that it hangs perfectly straight, push the tail gently to the left or right. It should swing continuously as the electromagnet pushes it along.

Troubleshooting Tips:

Tail is missing

Try completely dismantling the box, checking in the top and bottom panels. If the tail is not there, please contact N.J. Croce Co.

Tail will not swing

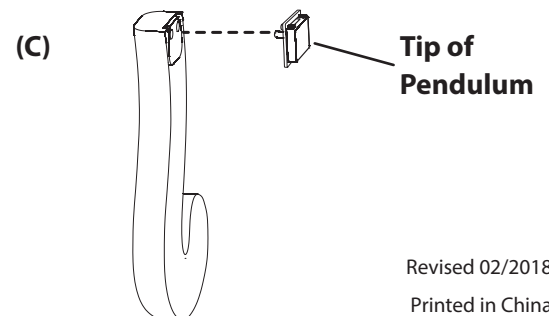

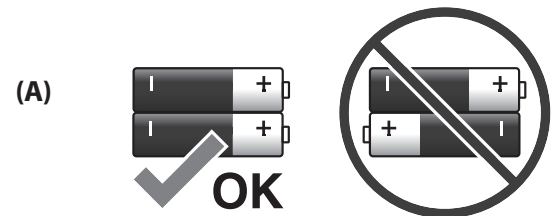

- Is the clock hanging level to the wall so the tail can swing freely?
- Is the tail attached correctly and firmly to the pendulum?
- Is anything broken off or rattling around inside?
- See ‘Battery Issues’ (below)

Timepiece is not working

- See ‘Battery Issues’ (below)

Battery issues:

- Are the batteries fully-charged, and installed at the **correct polarity**?
- If the batteries won't fit, try a different brand (see “A” above).
- Try spinning the batteries in the compartment for better contact.
