

Homer Simpson Animated Wall Clock Instructions

Thank you for purchasing the official Homer Simpson animated wall clock. Please read these instructions carefully and save them for future reference.

(A) Battery Installation

Carefully insert 2 "AA" batteries into the battery compartment as shown following the correct polarity (+) or (-) as indicated.

Note: Both batteries point in the same direction. The top battery provides power for the clock; the bottom battery provides power for the movement of the eyes and arms.

(B) Adjusting the Time

To set the time, turn the Time Set Dial on the back of the clock until the hour and minute hands are showing the correct time.

The Time Set Dial is located inside the battery compartment, to the right of the top battery (Figure B).

(C) Starting the Arm Motion

Mount the clock on a wall and then gently push one of Homer's arms upward to begin the back and forth movement.

Note: The clock may not operate properly unless the clock is mounted vertically on a flat surface, (e.g. mounted on a wall).

Care for Your Clock

To clean, wipe the clock surface with a soft cloth or paper towel. Do not use any corrosive cleaner or chemical solutions on the clock -this may result in discoloration of the clock lens.

Keep the clock dry and clean to avoid mechanical problems.

Clock Trouble-shooting check list

1. Did you use TWO batteries? The clock requires two alkaline batteries: one battery powers the time-piece, the other battery powers the pendulum.
2. Are the batteries new and have a full charge?
3. Are the batteries inserted correctly so that the positive and negative polarities match? See illustration.
4. Was the clock hung vertically at 90 degrees on a wall to ensure proper movement of the pendulum?
5. Was the clock hung so the top and bottom are in perfect alignment with each other?
